TECHNICAL SKILLS

Languages: Java [Advanced], C++ [Advanced], JavaScript [Advanced], Python [Basic]

Frontend: HTML, CSS, React, React Router, Redux, Bootstrap, ShadCN

Backend: Node.js, Express.js (RESTful APIs, JWT Authentication, Middleware), WebSocket

Databases: MongoDB, PostgreSQL, Firebase, Supabase, Redis, Caching & Throttling

Tools & Technologies: Electron.js, Swing, Robot API, Git, GitHub, Chokidar, Drivelist, Docker, Sentry, UptimeRobot

PERSONAL STATEMENT

Full-stack developer with 700+ DSA problems solved (LeetCode 1600+ rated). Built projects across the full stack: from low-level network traffic analyzers (NetPulse) and steganography tools (PixelVault) to WebSocket social platforms (Gossip) and real-time queue systems (Queue Away). Developed automation utility (Anti-AFK) preventing system timeouts with 100% reliability in 500+ test runs. Designed Redis caching strategy reducing database queries by ~35% in local load testing. Total development output: 10,000+ lines of code across personal projects.

PROJECTS

[Gossip](#) | [Live](#)

August 2025 – March 2026

Developed a WebSocket-based social platform with interest-based communities and per-post visibility controls. Implemented real-time feed updates using Socket.io with JWT-authenticated identity modes.

- **Tech Stack:** JavaScript, Node.js, Express.js, Socket.io, PostgreSQL, Redis, Docker, Nginx, Sentry, Cloudinary, Supabase.
- **Problem Solved:** Allowed users to toggle anonymity and content visibility controls.
- **Impact:** Redis caching reduced PostgreSQL query frequency by ~35% under local load testing. WebSocket layer handles simulated concurrent connections with <150ms latency. Containerized with Docker + Nginx.
- **Challenges:** Integrated Sentry for error tracking; resolved 12+ WebSocket edge cases including reconnection and message queuing.

[Queue Away](#) | [Live](#)

June 2025 – January 2026

Built a real-time appointment and queue management platform with live status updates, queue tracking, and direct chat. Designed 8 database tables for queue state, user sessions, and appointments.

- **Tech Stack and Frameworks used:** JavaScript, Node.js, Express.js, Socket.io, React, RESTful API Design, Real-time Event Handling, Supabase.
- **Use Case:** Eliminated physical wait times by allowing users to join digital queues remotely.
- **Usage:** Designed 8 database tables for queue state, user sessions, and appointments. Socket.io rooms isolate queue sessions preventing cross-queue interference. Built 10+ RESTful endpoints for queue CRUD and booking operations.
- **Learning Outcome:** Implemented WebSocket state synchronization and resolved 12+ edge cases including race conditions in concurrent queue join logic.

EDUCATION ENROLLMENT

Kalvium's UG program in CS (Software Product Engineering)
CGPA - 9.78

2024-28

Campus: Baddi, Himachal Pradesh | Bachelor's enrollment: B.E. CSE, Chitkara University

ACHIEVEMENTS & EXTRACURRICULARS

- **Hackathons & Competitions:** Delivered production-ready, full-stack prototypes at 3 hackathons (SIH, HackIndia, PromptRepo) under 48-hour sprints. Regularly compete in LeetCode contests (1600+ rating) and have secured top 5 positions in 2 intra-campus coding competitions.
- **Technical Contributions:** Active participant in Hacktoberfest; contributed to 20+ external repositories, focusing on bug fixes, feature enhancements, and documentation improvements across diverse tech stacks.
- **Campus Engagement:** Competed in 5+ intra-campus coding competitions; secured top 3 placements in 2 competitions.
- **Personal Interests :** Compete in Badminton and Table Tennis to build the agility and mental focus essential for engineering persistence.
